Cole Pickett

Portland, OR | pickett.co@northeastern.edu | (971) 420-9715 | linkedin.com/in/cole-pickett | cole-pickett.com

EDUCATION

Northeastern University Boston, MA | **GPA 3.8** | Dean's List **Expected Graduation:** Dec. 2028

Bachelor of Science in Mechanical Engineering

Relevant coursework: Thermodynamics, Chemical Safety, Statics, Physics 2, Solidworks, AutoCAD, Arduino, C++

Clubs: Lacrosse MCLA DI Goalkeeper, Autodesk Ambassador, American Society of Mechanical Engineers

EXPERIENCE

SwimEx Inc. *Design Engineering Intern* Jan. 2026-June 2026

- Created configurable design files for 10 products reducing engineering hours per order by 40%
- Designed & Modeled 25+ modified pools for manufacture using Fusion
- Prototyped design for new DepthSelect product series in a team of 2; Executed composite FEA, then validated FEA results with physical test piece - Created 3D printed seal cross section for experimental proof of concept. Modeled full scale prototype, oversaw manufacture
- Collaborated cross functionally with sales and administrative office to design DepthSelect for both visual and practical appeal; Created early product renders for service by sales team

Sightline Intelligence *Manufacturing Engineering Intern* June 2025-Jan. 2026

- Created mechanical drawing templates in AutoCAD, OnShape, Fusion - Created or updated drawings for 50+ components (wires, mechanical components, circuit conformal coats)
- Invented, designed, and used SLA/FDM 3D printing to prototype protective case for product test kits reducing product waste by preventing damage during transport, software testing, and hardware benchmarking
- Led software research for new MCAD - Presented findings to engineering team + management & led discussion that chose Autodesk Fusion software; Transferred ~70 drawings saving 300 engineering hours whilst cutting $40,000 of software costs over the next decade

Northeastern Electric Racing *Aerodynamics Engineer* Sep. 2024-Jan. 2026

- Led R&D on employment of Gurney flaps on the front and rear wings to increase effective airfoil area
- Designed front suspension winglets in Solidworks to reduce drag and create downwash for powertrain cooling + outwash to reduce airflow interruptions in the rear of the car
- Presented in and assisted design reviews to make key decisions about the total aerodynamic package

PROJECTS

Prototype Warehouse Robot May 2025

- Created an autonomous organizational robot using C++, Fusion, arduino wiring, and FDM printing
- Employed ultra-sonic sensors, and contrast sensors to allow autonomy

Atmospheric Ion Thruster Optimization Apr. 2024

- Worked in partnership to research and develop functioning ion thruster
- SLA 3D printed, soldered, and electroplated anode and cathode options
- Awarded 1st place in electrical engineering at the Oregon State Science & Engineering Fair

SKILLS

Design: Fusion CAD & FEA, AutoCAD, Inventor, SolidWorks & PDM, OnShape

Manufacture: Fusion CAM, CNC, FDM & SLA, GD&T, Soldering

Software: MATLAB, C++, Arduino, HTML, CSS
